x.com/mattinfra

Full-stack software engineer building production web/mobile products, backend APIs, real-time systems, AI-agent tools, AI evaluation benchmarks, and cross-platform SDKs. Built SolPulse (800+ users, 4.3/26 rating/reviews), Agentic (1000+ users, 4.2/35), AI Fund / Andrew Ng ConfigPilot, Klavis TB3 eval work, and SDK/security tooling across Unreal, Cocos, Capacitor, Godot, Unity, iOS, and TxShield.

EXPERIENCE

Independent Full-Stack Engineer / Open-Source SDK Builder 2025 - Present

- Built and launched SolPulse, a production trading platform across web, Android, and iOS using React/Vite, Node/Express, PostgreSQL/Prisma, Redis, real-time logs, and mobile store releases.
- Built and deployed Agentic, a multi-wallet AI-agent signer across web, mobile, CLI, and desktop, reaching 1000+ users in under 1 month with 35 reviews and a 4.2-star rating.
- Designed automated trading infrastructure with multi-mode scanning, DCA, limit orders, smart TP/SL exits, real-time filters, multi-DEX routing, priority fee controls, and execution logs.
- Built security-sensitive approval and signing workflows using Mobile Wallet Adapter, Wallet Standard, Seed Vault, and mobile deeplink patterns so private keys remain inside user wallets/devices.
- Created wallet SDKs and demos for Unreal Engine, Cocos Creator, Capacitor, Godot, Unity, and iOS-native wallet adapter flows.
- Contributed merged upstream PRs to Godot Mobile Wallet Adapter and Unity Wallet Adapter repositories.

Analytics Specialist, Socket Mobile, Inc. Apr 2020 - Jul 2023 Fremont, CA

- Delivered actionable web analytics reports, performance dashboards, and strategic recommendations for marketing and leadership decision-making.
- Managed analytics workflows from data collection through QA, insight generation, reporting, and stakeholder presentation.
- Partnered with leadership and marketing teams to solve operational bottlenecks, improve reporting accuracy, and support business scaling.
- Planned and analyzed A/B and multivariate tests across channels and customer segments.

SELECTED PROJECTS

SolPulse - Trading Platform React, Node, PostgreSQL, Redis

- Built solo full-stack trading product with live website, App Store, Google Play, and browser-visible release proof.
- Implemented execution engine with Sniper, DCA, limit orders, smart exits, multi-DEX swap routing, priority fee controls, and real-time strategy logs.
- Built intelligence and risk systems covering token scoring, dev identity checks, smart money tracking, rug scanning, whale scanning, max daily loss, and per-trade risk caps.

Agentic - AI Agent Signing Platform Web, CLI, Desktop, App Store

- Built first multi-wallet AI-agent signer across web, mobile, CLI, and desktop, reaching 1000+ users in under 1 month with 35 reviews and a 4.2-star rating.
- Implemented shared WalletBackend architecture powering chat/app flow, MCP tools, Vercel AI tools, browser demo, CLI, and desktop shell.
- Added tools for address lookup, message signing, transaction signing, sign-and-send, approval polling, and transaction simulation.

AI Systems and Evaluation Python, Docker, Terminal-Bench, FastAPI

- Built ConfigPilot for an AI Fund / Andrew Ng challenge: an OEM decision engine with deterministic AI guardrails for margin, inventory, lead-time, and audit-verified recommendations.
- Designed a Klavis Terminal-Bench 3 durable-outbox benchmark with 6/6 clean reward-0 trials across Claude Opus and OpenAI Codex, exposing frontier-agent false positives in UNKNOWN outcomes, receipts, revocation, exactly-once execution, and audit legality.
- Hardened verifier isolation against reward-hacking using a separate tool ledger, root-only controls, unprivileged execution, cheat oracles, and deterministic reward checks.

Cross-Platform SDKs and Engine Integrations Unreal, Cocos, Godot, Unity, iOS

- Built Unreal Engine 5 mobile wallet plugin using Kotlin clientlib, C++ JNI bridge, Blueprint UFUNCTION surface, auth caching, SIWS, signing, and sign-and-send flows.
- Built first Cocos Creator Mobile Wallet Adapter SDK from scratch with TypeScript API, native Android bridge, ECDH/AES-GCM wallet association, auth caching, and Token Duel demo game.
- Delivered Godot MWA reconnect architecture, SIWS wallet-proof APIs, persistent auth-token cache, Unity WebGL UX fix, and iOS-native Swift/CryptoKit wallet adapter flows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Node.js, Swift, C#, C++, GDScript, Kotlin, SQL, Python

Frontend: React, Vite, Zustand, Tailwind, Radix UI, Capacitor, SwiftUI

Backend: Express, FastAPI, Pydantic, PostgreSQL, Prisma, Redis, WebSockets, SSE, REST APIs

Security / Transaction Systems: web3.js, Mobile Wallet Adapter, Wallet Standard, Seed Vault, Jupiter, Anchor, SPL tokens, transaction signing

Platforms: Android, iOS, Unity, Unreal Engine, Godot, Cocos Creator

AI Eval / Infra: Docker, Harbor, Terminal-Bench, deterministic verifiers, CI, observability, logging

LAUNCH METRICS

800+ SolPulse users	4.3 / 26 SolPulse rating/reviews
1000+ Agentic users	4.2 / 35 Agentic rating/reviews
2 Store-listed apps	4 Merged upstream PRs

OPEN-SOURCE PROOF

- GitHub portfolio: github.com/mstevens843
- Godot Mobile Wallet Adapter PRs: #449 reconnect/capabilities/sign-send bridge; #453 SIWS wallet-proof APIs; #454 auth-token cache.
- Unity Wallet Adapter merged PR: #275 WebGL single-wallet auto-select UX fix.
- Project proof: ConfigPilot, Klavis TB3 durable outbox, TxShield, Unreal MWA, Cocos MWA, Capacitor MWA, iOS Wallet Adapter.

EDUCATION

San Francisco State University
B.S., Business Information Systems, 2018

Springboard
Software Engineering Certificate, 2025
Full-stack curriculum covering JavaScript, React, Node.js, Express, PostgreSQL, REST APIs, auth, and testing.

FOCUS AREAS

- Full-Stack Products
- AI Evaluation
- Real-Time Systems
- SDK Engineering
- Mobile Apps
- AI Agent Tools

Best-fit roles: full-stack product engineering, backend/API systems, AI evaluation, SDK engineering, mobile apps, real-time infrastructure, agent workflows, and user-facing product engineering.
