Full-stack software engineer building production web/mobile products, backend APIs, real-time systems, AI-enabled workflows, SDKs, and reliability/evaluation tooling. Creator of Agentic and SolPulse, with 1,800+ users, 62 reviews, app-store releases, trading infrastructure, wallet/security systems, Capability Record Replay, Terminal-Bench work, Crashpoint, and AI Fund / Andrew Ng ConfigPilot.

EXPERIENCE

Independent Full-Stack Engineer / Product & Systems Builder

2025 - Present

- Built and deployed Agentic, a multi-wallet AI-agent signer across web, mobile, CLI, and desktop, reaching 1000+ users with 36 reviews and a 4.2-star rating.
- Built Capability Record Replay, a model-to-deterministic-replay runtime where one LLM discovery run becomes a typed, approved capability that later executes with no model in the decision path.
- Built AI-agent reliability/eval systems covering Terminal-Bench durable-outbox failures, exactly-once external actions, crash/recovery conformance, detector undercount, and judge artifact.
- Delivered AI Fund / Andrew Ng ConfigPilot, an OEM decision engine where LLM recommendations are checked by deterministic margin, inventory, lead-time, policy, and audit guardrails.
- Built and launched SolPulse, a production trading platform across web, Android, and iOS with multi-mode scanning, DCA, limit orders, smart exits, risk caps, and real-time strategy logs.
- Built wallet/SDK surfaces across Mobile Wallet Adapter, Wallet Standard, Seed Vault, Unreal, Cocos, Godot, Unity, Capacitor, and iOS-native signing flows; contributed merged upstream PRs to Godot and Unity wallet adapters.

Analytics Specialist, Socket Mobile, Inc.

Apr 2020 - Jul 2023
Fremont, CA

- Owned analytics workflows from data collection and QA through dashboards, reporting, insight generation, and stakeholder presentations for marketing and leadership.
- Partnered with leadership and marketing teams to improve reporting accuracy, identify operational bottlenecks, and support A/B and multivariate analysis across channels and customer segments.

SELECTED PROJECTS

Agentic - AI Agent Signing Platform

Web, CLI, Desktop, App Store

- Built multi-wallet AI-agent signer where agents propose wallet actions and users approve through their own wallets; private keys never leave user devices.
- Reached 1000+ users with 36 reviews and a 4.2-star rating across web, mobile, CLI, desktop, MCP tools, SDK surfaces, and app-store releases.
- Implemented shared WalletBackend plus A2A AgentCard, AP2/ACP/MPP payment-adapter flows, MCP/Vercel AI tools, approval polling, simulation, and sign-and-send UX.

Capability Record Replay - Agent Automation Runtime

TypeScript, Playwright, Anthropic, CLI

- Built system where an LLM drives a legacy back-office UI once, then synthesis emits a typed, versioned capability artifact replayed without a model in the decision path.
- Implemented browser and terminal surfaces, deterministic interpreter, policy chokepoint, signed approvals, typed business outcomes, recovery/failure taxonomy, evidence journals, and redaction canaries.
- Verified a live Claude Opus discovery run and model-free replay; conformance suite killed 9/9 weakened replay engines across 25 hostile fixture scenarios.

Agent Reliability & Eval Integrity Systems

Python, TypeScript, Docker, Terminal-Bench

- Built original Klavis Terminal-Bench durable-outbox task where 6/6 frontier-agent trials failed clean reward-0; reference implementation passes 267/267 checks.
- Built Durable Agent Outbox and Crashpoint to measure exactly-once external side effects, UNKNOWN outcomes, receipt reconciliation, revocation, and crash/recovery across LangGraph, Temporal, and DBOS.
- Built Cheat-Oracle and Judge-Artifact audits showing detector undercount and grader artifact in public agent benchmarks, with tamper-evident receipts, controls, and disclosure-ready reports.

SolPulse - Trading Platform

React, Node, PostgreSQL, Redis

- Built solo full-stack trading product with live website, App Store, Google Play, and browser-visible release proof.
- Implemented execution engine with Sniper, DCA, limit orders, smart exits, multi-DEX swap routing, priority fee controls, and real-time strategy logs.
- Built intelligence and risk systems covering token scoring, dev identity checks, smart money tracking, rug scanning, whale scanning, max daily loss, and per-trade risk caps.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Node.js, Swift, C#, C++, GDScript, Kotlin, SQL, Python

Frontend: React, Vite, Zustand, Tailwind, Radix UI, Capacitor, SwiftUI

Backend: Express, FastAPI, Pydantic, PostgreSQL, Prisma, Redis, WebSockets, SSE, REST APIs

Security / Transaction Systems: web3.js, Mobile Wallet Adapter, Wallet Standard, Seed Vault, Jupiter, Anchor, SPL tokens, transaction signing

Platforms: Android, iOS, Unity, Unreal Engine, Godot, Cocos Creator

Systems / AI Infra: capability replay, deterministic interpreters, policy gates, side-effect ledgers, Terminal-Bench, conformance suites, mutant tests, eval-integrity audits

LAUNCH METRICS

4

Merged upstream PRs

OPEN-SOURCE PROOF

- GitHub portfolio: github.com/mstevens843
- Godot Mobile Wallet Adapter PRs: #449 reconnect/capabilities/sign-send bridge; #453 SIWS wallet-proof APIs; #454 auth-token cache.
- Unity Wallet Adapter merged PR: #275 WebGL single-wallet auto-select UX fix.
- Project proof: capability-record-replay, durable-agent-outbox, crashpoint, cheat-oracle, judge-artifact, agent-context-containment, model-regression-sentinel, toolcall-risk-classifier, ConfigPilot, Klavis TB3, TxShield.

EDUCATION

San Francisco State University
B.S., Business Information Systems, 2018

Springboard
Software Engineering Certificate, 2025

FOCUS AREAS

Full-Stack Products

AI Systems

Eval Integrity

Real-Time Systems

Mobile Apps

SDK Engineering

Best-fit roles: full-stack product engineering, backend/API systems, AI-enabled systems, reliability/eval tooling, SDKs, mobile apps, and real-time infrastructure.
